ABOUT US

Bitfiler is the World's First Peer-To-Peer Team Crowdfunding System that allows you to earn everything that happens in your organization forever! It is based on the world-famous Mobius Loop and System G Technology, which is the most successful Peer-To-Peer Team Crowdfunding Program in the history.

VISION

To connect people around the world with one another and empower the life of millions of individuals by providing financial help. Everyone deserves a better life, and they should have it now and Capital is here to ensure it with Unique programme.

We want to bring world together without any currency barrier and border. We also aim to create a system for passive income where no one is in control and the code does everything automatically on a platform that cannot be hacked or changed.

What is DAPP

A DAPP has its backend code running on a decentralized peer-to-peer network. Contrast this with an app where the backend code is running on centralized servers.

A DAPP can have frontend code and user interfaces written in any language (just like an app) to make calls to its backend. Furthermore, its frontend can get hosted on decentralized storage such as IPFS.

- **Decentralized** - DAPPs operate on Tron, an open public decentralized platform where no one person or group has control
- **Deterministic** - DAPPs perform the same function irrespective of the environment in which they get executed
- **Turing complete** - DAPPs can perform any action given the required resources
- **Isolated** - DAPPs are executed in a virtual environment known as Tron Virtual Machine so that if the smart contract has a bug, it won't hamper the normal functioning of the blockchain network

Benefits of DAPP

- **Zero downtime** – Once the smart contracts is deployed on the blockchain, the network as a whole will always be able to serve clients looking to interact with the contracts. Malicious actors, therefore, cannot launch denial-of-service attacks targeted towards individual DAPP.
- **Privacy** – You don't need to provide real-world identity to deploy or interact with a DAPP.
- **Resistance to censorship** – No single entity on the network can block users from submitting transactions, **deploying DAPP, or reading data from the blockchain.**
- **Complete data integrity** – Data stored on the blockchain is immutable and indisputable, thanks to cryptographic primitives. Malicious actors cannot forget transactions or other data that has already been made public.
- **Trustless computation/verifiable behavior** – Smart contracts can be analyzed and are guaranteed to execute in predictable ways, without the need to trust a central authority. This is not true in traditional models; for example, when we use online banking systems, we must trust that financial institutions will not misuse our financial data, tamper with records, or get hacked.

What is USDT

Tether (USDT) is a blockchain-based cryptocurrency whose tokens in circulation are backed by an equivalent amount of U.S. dollars, making it a stable coin with a price pegged to USD \$1.00. Stable coins track traditional fiat currencies, like the dollar, the euro, or the Japanese yen, which are held in a designated bank account.

Tether tokens, which were developed by the crypto exchange Bitfinex, are the native tokens of the Tether network and trade under the USDT symbol. As of October 2021, USDT is the fifth-largest cryptocurrency by market capitalization, worth more than \$68 billion.

Tether belongs to a breed of cryptocurrencies called stable coins which aim to keep cryptocurrency valuations stable, as opposed to the wide swings observed in the prices of other popular cryptocurrencies like Bitcoin and Ethereum. That would allow it to be used as a medium of exchange and a mode of storage of value, instead of being used as a medium of speculative investments.

USDT Used For?

Tether is useful for crypto investors because it offers a way to avoid the extreme volatility of other cryptocurrencies. Furthermore, having USDT (as opposed to the U.S. dollar) removes transaction costs and delays that impair trade execution within the cryptomarket.

What Is the Point of the Tether Token?

Tether (USDT) offers a way for investors to avoid the extreme volatility of other cryptocurrencies. By moving value to USDT, a trader might reduce their risk of exposure to a sudden drop in the price of cryptocurrencies. It is also much quicker and cheaper to transfer BTC into Tether rather than the U.S. dollar.
